DETAILED ACTION

Response to Amendment

1. Applicant's amendments and accompanying remarks filed 10/24/02 have been entered and carefully considered. The previous rejection is withdrawn because the best prior art was not applied against the claims. Despite this advance, the amendments are not found to patently distinguish the claims over the prior art and Applicant's arguments are not found persuasive of patentability for reasons set forth herein below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 7-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson (4472461).

Johnson is concerned with the creation of nonwoven material comprising an adhesive composition and a plurality of apertures (abstract). Said adhesive disposed in a pattern (abstract). Said apertures originating from a second surface of the fabric (fig. 4).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson (4472461).

Johnson seems to be silent with respect to the specific composition of the adhesive. It would have been obvious to utilize either a hydrophilic or a hydrophobic adhesive. These two alternatives encompass virtually all known adhesives. The skilled artisan would have been motivated to select one by the desire to reduce the teachings of Johnson to practice.
